

29/1/2021 Council of the Server jointly with the People's Ideological Defense Organisation Report to the Council of the Server, People's Ideological Defense Organisation and the People's Assembly.
Information: P1C5IRV //International Regulations Violation

To hereby inform the People's Assembly, the nation, the CotS and PIDO,

On 29/1/2021 a major incident occurred where RedPanda_4 (HoCotS) found a disconnected trail towards the nether hub, which led to an area where a major duping operation was being performed. After inspecting with CoreProtect, it appeared that both _XeNONE_ and janszokoloko1 built and were using the machines.

When RedPanda_4 found this, the CotS was convened and the server was temporarily shut down to prevent others from getting involved. Once we went through the portal, it appeared that the operation was being conducted on a massive scale with many many violations: rail duping, carpet duping, and most likely crying obsidian duping. This coupled with further strange behaviours like making a lava cast through the world border.

The duplicated materials were deleted, the materials taken by them from other sources were returned and the rest was put in the communal storage in Osbos, Azuristan.

When the main nether under the roof was later examined, it appeared that there had been mass griefing by spamming duplicated materials everywhere. This all, including the buildings and duping machines, were reverted.

Both players have been permanently banned.
